

Charting The Course Of Innovation: A Startup Analysis

1.INTRODUCTION

1.1OVERVIEW

Starting a new company can be an exciting and rewarding experience, but it also requires careful planning and analysis to ensure that the business is viable and successful. There are several key areas that you should focus on when conducting a startup company analysis. Conducting a thorough analysis of these areas can help you identify potential challenges and opportunities, and develop strategies to address them. It is also important to regularly review and update your analysis as the business progresses, in order to adapt to changing market conditions.

1.2 PURPOSE

A startup is a company or organization in its early stages, typically characterized by high uncertainty and risk. A startup's success depends on its *ability to solve a problem that people care* about, and to do so better than anyone else.

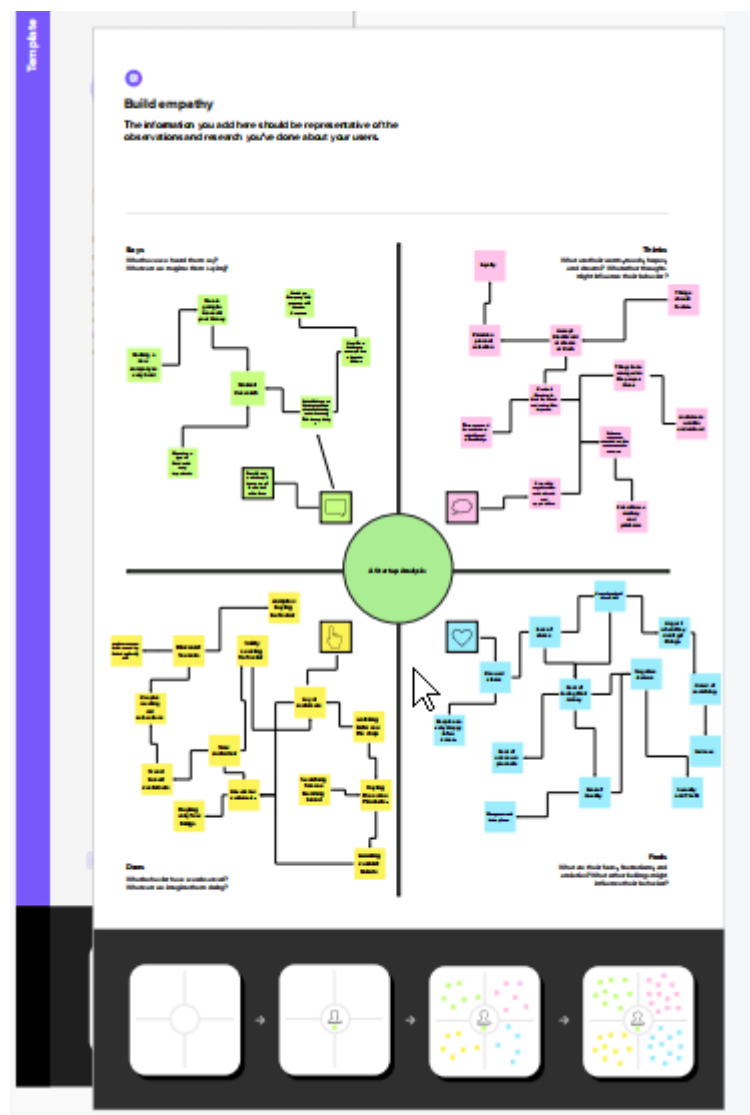

The first step in starting a startup is to define what the company is and what it does. This may seem like a simple task, but it's actually one of the most important and difficult parts of starting a company. The reason it's so important is that a startup's success depends on its ability to solve a *problem that people care* about. And the reason it's so difficult is that it's hard to know what people care about.

The best way to define a startup is to think of it as a problem-solving machine. A **startup is a team of people** trying to solve a problem. The first step in starting a startup is to find a problem that needs solving.

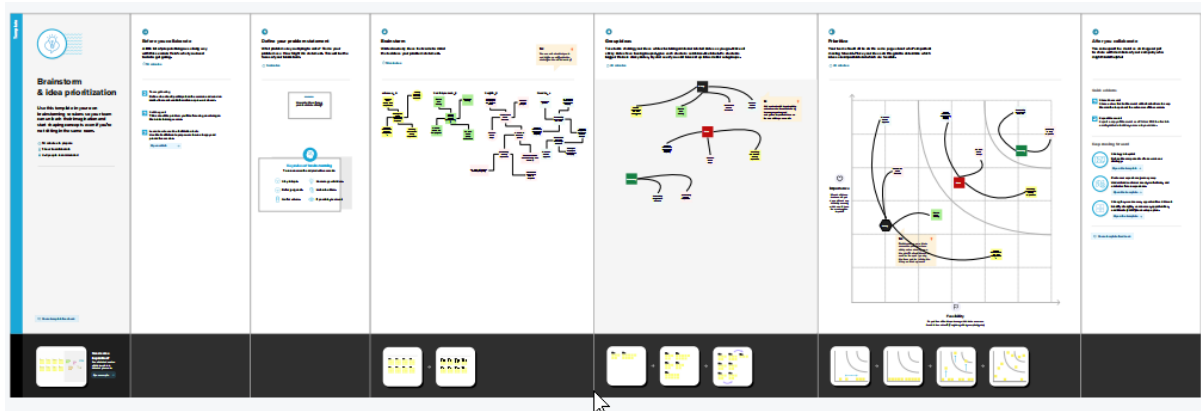

Once you've found a problem that needs solving, the next step is to find a solution that people will pay for. This is where many startups fail. They either can't find a solution that people will pay for, or they find a solution but can't get people to pay for it.

3.RESULT

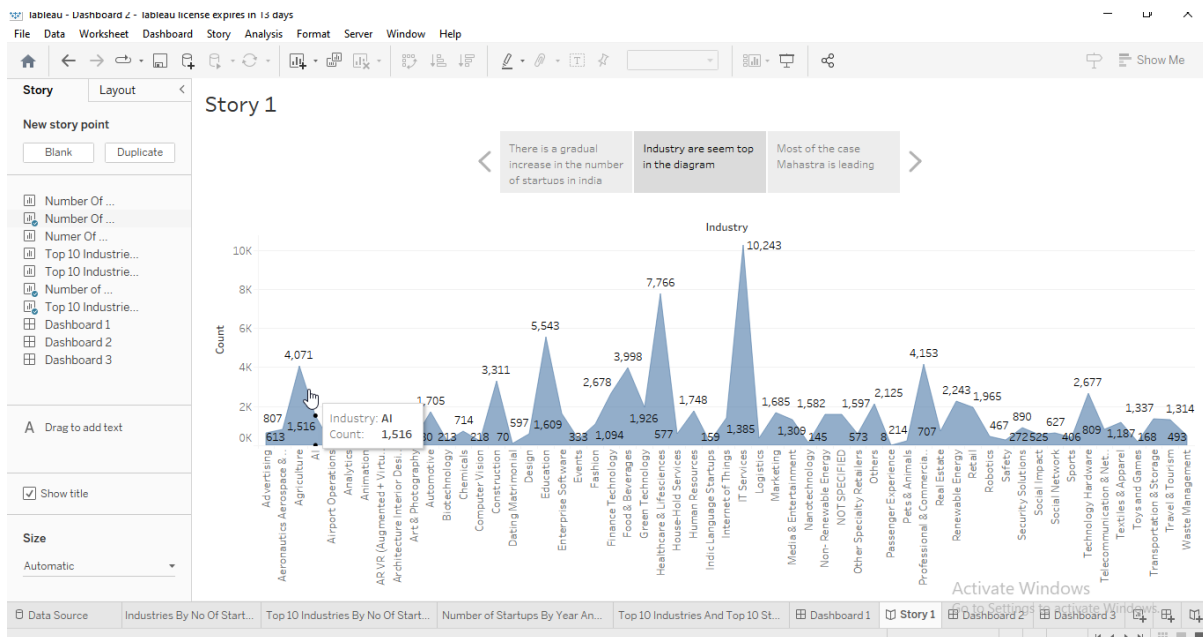

4. ADVANTAGES & DISADVANTAGES

Advantages

1. Agility

Startups are smaller and less structured, so they can adapt to disruptive technologies and changes in market conditions. Unlike their more established competitors, who are burdened deal with vested interests, a historic path, and a culture that resists change. Startups have innovation in their DNA and seek to gain a competitive edge by improving their business models, processes, and portfolio.

2. Efficiency (Lean and Mean)

Startups have lower administrative overheads and offer their services in an efficient, cost-effective and competitive manner. They are likely to be aware of their limitations and tend to focus on their core strengths. Startups easily recognize the benefits of partnering with other like-minded organizations to present the customer with an equal or superior value proposition.

3. Team Culture

Employees of large corporations are attracted and retained by prestige and big salaries. They easily lose sight of the company's vision, mission and values and the success of its customers. Startup employees on the other hand form a close-knit community that shares passion, beliefs and values. They must work together for the good of the company, its customers and the world at large.

4. Personalization

Startups deliver their products and services with a personal touch and create a unique a personal experience for their customer. Due to their agility they can adapt their offerings to unique customer needs and preferences. Startups typically take more time to understand and satisfy your business requirements, since every customer is a big deal to them.

5. Versatility

It's common that employees of startups multi-task and the person making the sale could become the relationship manager during the implementation phase. This builds trust with the client and offers a guarantee for successful delivery and implementation. The versatility of startup employees is reinforced by a team culture that encourages learning and innovation.

6. Flexibility

Your organization could have rather unique needs and demands for products and services. Such needs and demands might not be met by large and established service providers that operate in a rigid manner that suits them. Startups on the other hand operate with great flexibility and are more likely to work at the hours, the place and in the manner that suits you.

7. Fun

Last but not least, working with a startup is going to be a lot more fun. A startup needs fewer clients and ends up working for clients where there is synergy and mutual appreciation. This makes working so much more

enjoyable. A small band of tightknit staff opens the door for spontaneous and fun activities after work and over the weekends, like barbeques and hiking trips.

Disadvantages

1. Risk

Most startups fail within their first year of operations for various reasons, so the risk of failure is high. Working under such circumstances can cause startups to be overly cautious in seizing market opportunities or overly optimistic in estimating the potential market for their products and services. It also means that startups find it difficult to attract experienced and competent staff.

2. Compensation

Long working hours are the norm for startups, since companies are built by blood, sweat and tears. The rewards might not be forthcoming, and it could take several years before the company starts making revenue and becomes profitable. Working without pay or for low compensation is demotivating, and some startups fail to persist and simply give up.

3. Market Access

Many businesses prefer to work with businesses they know and have worked with, and this puts startups at a serious disadvantage. Established businesses also spend less money and effort on retaining existing customers than startups spend on acquiring new customers. Without a customer base, startups notably struggle to understand the evolving market needs and preferences.

4. Team Composition

Some startups are born out of desperation, since the founder could not find or hold on to a job. Most of such founders become solopreneurs who struggle to build a team that the business needs to succeed. A startup

venture requires founders / co-directors who complement each other in personality and competencies, but disagreements easily creep in when the going gets tough.

5. Resources

Growth hacking, cloud computing and venture capitalism have leveled the playing field for startups, but established businesses have deeper pockets. Most startups operate on a shoestring budget, while their competitors have huge financial and non-financial assets. Those are used to support product development, sales, and marketing efforts and stop startups from entering the market.

6. Processes

Startups have a flat organizational and are less organized with no or undefined business processes and operational procedures. That makes them lean and agile, but also prone to errors that exposes them to poor customer service, legal liability, and financial losses.

7. Stress

We did mention that working for a startup is fun, but it could turn out to be extremely stressful. Working long hours with a load of responsibilities for low compensation is bad enough. But this becomes unbearable when you add unqualified colleagues, haphazard processes, screaming customers and an imminent risk of business failure.

5.APPLICATION

Any kind of business shows tremendous growth by involving approaches and techniques used in business analytics.

In order to see the progress of business in the vast domain, data-driven results gain special attention in various industries and markets. This is where the role of the business analyst comes into play and is used at a high scale in the industry.
